

## SENTINEL PUMPS

Sentinel pumps are manufactured by a Mexican group with over 70 years of experience transforming metals and fluid handling. Products range includes general services, industrial and process pumps designed for a range of applications.

Sentinel worldwide market has become increased through our valuable commercial partners.

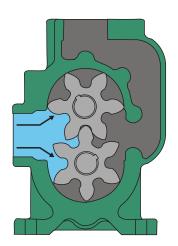

Design types manufactured under Sentinel Brand: Internal Gear, Helical Gear, External Gear, Turbine and Centrifugal.

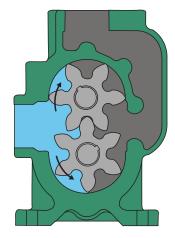

# HELICAL GEAR PUMPS

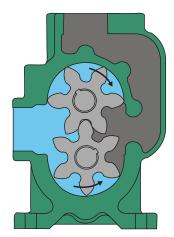

These pumps operate without problems or difficulties and with equal efficiency in either direction of rotation. They effectively handle viscous liquids such as asphalts, molasses, fuel oil as well as thin liquids. They are made of iron and some models are also made in stainless steel with relief valve in both materials. They are available with packed box or mechanical seal. Due its design, they can be direct driven, with belt-drive transmission and through a built in gear reduction.

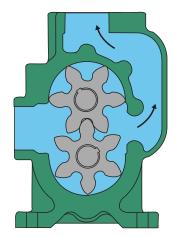

# HOW IT WORKS

Because of the helical gear design the point of engagement moves along the length of the gear teeth as the gears rotate. The overlapping of successive discharges from spaces between the teeth makes the discharge flow smooth. This makes helical gear pump operate with a steady discharge and few pulsations.

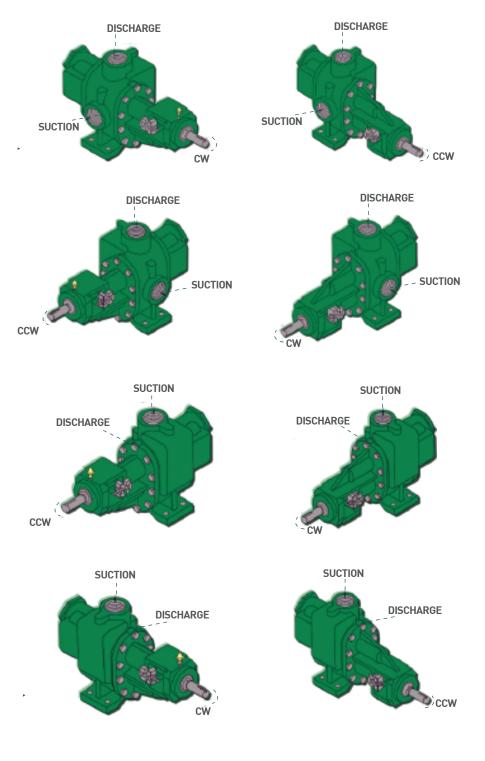

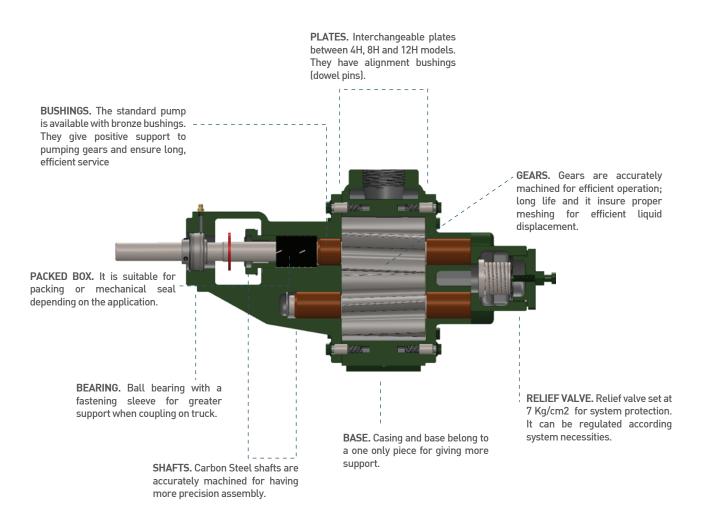

Direction of rotation is determined according to the system. The direction of rotation can be inverted as well as putting the suction and discharge ports in different positions, that is why this pump is the most adequate to be mounted on trucks.

#### **PUMP** COMPONENTS

#### **FEATURES**

1.- H Series pumps operate without problems or difficulties and with equal efficiency in either direction of rotation.

2.- They effectively handle viscous liquids such as asphalts, molasses, fuel oil as well as thin liquids.

3.- They are made of Iron and Stainless Steel (except model 16-H) with relief valve.

4.- They are available with packed box or mechanical seal.

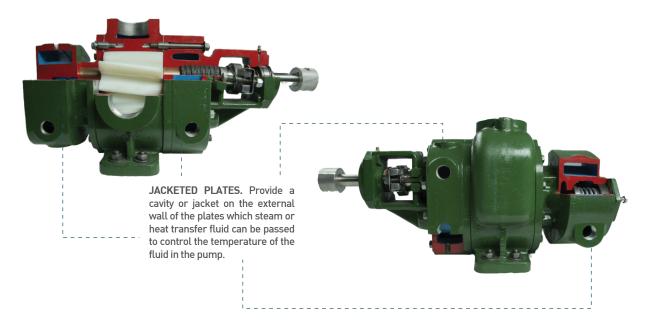

5.- Due its design, they can be direct driven, with belt-drive transmission and through a built in gear reduction.

6.- Tolerances on casing machined are the minimum to offer the best pump efficiency. It has also two drain plugs to drain pump.

# MODELS AVAILABLE

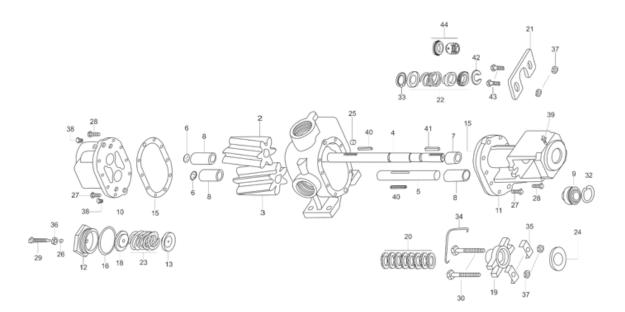

#### JACKETED OPTIONS (ONLY AVAILABLE FOR 4-H, 8-H AND 12-H)
